# AI-Tool Usage Declaration

AUTOSAR HLD Intelligence & Traceability Assistant | Tool disclosure table | Editable student verification form

## Student and project details

| Field | Student to complete |
|---|---|
| University | SASTRA Deemed University (confirm if required) |
| Student name | Guru S |
| Register number | 127003080 |
| Project title | AUTOSAR HLD Intelligence & Traceability Assistant |
| Date | 13-10-2026 |

## Tool-use disclosure

List every AI tool and pre-trained model used in the project, including tools used for coding assistance. The rows below are a draft based on the project context available at preparation time. Verify each row, change any inaccurate details, add missing tools, and remove any tool that you did not use. “Verified by student” must describe checks you personally performed; it must not be treated as pre-certified.

| AI model / tool | Purpose | Artifact affected | Verified by student |
|---|---|---|---|
| Ollama + Qwen2.5:3B | Local language-model inference for RAG responses. | Generated answers in the AUTOSAR HLD Assistant; local LLM inference for RAG responses. | Test with known-answer questions against the source HLD, inspect citations and contradictory cases, and record the final test results |
| BAAI/bge-small-en-v1.5 | Text embedding for semantic retrieval. | Document and query embeddings; semantic retrieval and FAISS vector index. | Check the embedding model configuration and vector dimensions, rebuild the index, and verify retrieval against known HLD queries. |
| ChatGPT / OpenAI assistant | Planning, explanation, documentation drafting and/or coding assistance where actually used. | Project planning, architecture explanations, documentation drafts, evaluation guidance, and coding assistance where used. | Compare generated suggestions with the actual repository, run relevant tests, manually check factual claims, and revise inaccurate or unsupported content. |
| Antigravity | Coding assistance, code inspection, or test iteration; specify actual tasks. | Code organization, code changes, test assistance, configuration updates, and evaluation pipeline fixes. | Review the actual changes, understand the affected files, run the relevant tests and commands, and inspect their outputs. |

## Student attestation

I confirm that the disclosure above is complete and accurate to the best of my knowledge. I have reviewed the AI-assisted or model-generated outputs used in the submission and remain responsible for their correctness. I have not represented unverified AI output as confirmed fact and have not fabricated results. I can explain the submitted implementation and the role played by each declared tool/model.
